

Punctureseal Heavy Duty Puncture Prevention

Punctureseal is a unique liquid tyre sealant that continuously stands on guard to protect tyres of all shapes and sizes. Researched and developed over 45 years, Punctureseal helps protect hundreds of thousands of customers worldwide from punctures and the costs inevitably associated with them. Punctureseal comes in both a standard commercial grade suitable for road vehicles, and a heavy-duty alternative.

Our heavy-duty off-the-road (OTR) formulation was originally developed for tyres on combat vehicles where bullet wounds would prevent the vehicle from completing its mission. Punctureseal Heavy Duty Grade is capable of sealing large wounds, providing extra reliability where downtime can be extremely costly.

How does it work?

When a tyre is punctured, Punctureseal is forced against the puncturing object, or into the wound it leaves. Special fibres entwine forming a clot. When exposed to outside air the seal hardens, becoming impervious to water (rain, snow, mud etc).

Key Features

- Off-the-road formula seals punctures caused by objects up to ½" (12mm) diameter
- Guards against flats and blowouts
- Extends tyre life; maintains optimum tyre pressure
- Conditions casing, retarding, ageing and dry rot
- Improves fuel mileage and saves £££s
- Effective at high speeds and temperatures
- Inhibits rust and corrosion
- Will not mask or hide dangerous wounds
- Tracking dye to identify punctures
- Reduces need for backup vehicles
- Does not void manufacturer's tyre warranties

Tried & Tested

Current users include plant and construction firms, waste management companies, the armed forces, and city councils.

Punctureseal OTR is suitable for:

- HGV Trailers - Agricultural Machinery
- Plant and Construction Equipment
- Horticultural Vehicles
- Loading Shovels
- Tractors / Grass mowers / Earth Movers
