To Whom It May Concern,

RE: PUNCTURESEAL EXTREME HEAVY DUTY SEALANT

Our company completes geophysical surveys in rugged and remote parts of Australia.

The survey crews are often travelling through deserts and scrub off roads and tracks for weeks at a time. In some areas they need to ride over dead wood and sticks all day. We have tough tyres but they are still prone to punctures due to the extra weight we carry and the conditions we operate in.

We recently tried Punctureseal Extreme Heavy Duty grade and our Senior Surveyor stated that" it is 100% better than any other tyre sealant we have used previously". In many instances sticks and stakes get embedded in the tyres but the sealant seals around them.

In one recent job a ATV's travelled over 800 kilometres crunching through scrub and the surveyor only had to intervene and repair a puncture about 4 times on the whole project. Another ATV working in the same area was getting 5 - 6 punctures per day using our normal sealant.

We highly recommend the Punctureseal Extreme Heavy Duty sealant for extreme ATV use.

Yours sincerely,
DAISHSAT Pty. Ltd.

David Daish, B.Surv
MANAGING DIRECTOR
