

## Motorbike case study

Punctureseal is designed to be applied when you replace your tyre. It provides 'before puncture' protection to tyre, while reducing fuel consumption and increasing tyre life.

Our 800ml commercial grade product is suitable for road bikes, and our 800ml extreme heavy duty is suitable for off-road bikes.

Our product can be installed in 5 minutes and will last the life of the tyre.

Unlike the 'get me home' products, this product prevents punctures in the first place.

Visit [www.punctureseal.com/retail.html](http://www.punctureseal.com/retail.html) to buy online.

“WOW ! This stuff really, really works. Got some Punctureseal, followed the simple instructions and back on the road really quickly. Had a puncture in a nearly new tyre on my motorbike the other day, removed a 4mm thick screw from my tyre and puncture seal really did seal it just about straight away, some of the blue fluid came out of hole in tyre, and I've ridden over 400 miles already, without tyre losing any pressure at all.

I will definitely put Punctureseal in all new tyres and recommend it to everyone.

Impressed !!”
