

Punctureseal™

Case Study – Motorhome

Problem

You are on your holiday, in your motorhome, or towing a caravan. You run over a rusty nail.

Treatment process

The treatment process for each type of tyre is similar. Firstly, the size of the tyre determines how much product to install. The Punctureseal mobile app provides dosage information for all tyre sizes. The product was installed by a Punctureseal dealer and took 25 minutes for the 6 wheels.

Benefits

The benefits of Punctureseal fall into two categories. Pre puncture and post puncture.

Pre puncture : Punctureseal will maintain your tyre pressures; great if your holiday vehicle doesn't move for months at a time. It will extend the life of your tyres 25%, and reduce your fuel bill by 2%.

Post puncture : Firstly, you probably won't notice anything if you hit a nail. It is only on vehicle inspection that you will realise that the nail in your tyre didn't cause a puncture. You avoid being parked up at the side of the road; never fun and often dangerous.

Costs of a Punctureseal

Depending on the number and size of wheels, you are looking at £50-£90 to protect your vehicle. That is less than the cost of a single tyre.

What Punctureseal is not!

Punctureseal is not a 'get me home' product that you install at the road side when you have a puncture. You install Punctureseal on new tyres, and it lasts for the life of the tyres.

Quote

"We drive our Lunar Roadster (Fiat base) all over the UK with 4 kids on board. We have not had a puncture since we installed Punctureseal. We live on a Farm in Scotland and drive to relatives in the South. It is all about reassurance really. I don't want a blow out with the family on board at 60mph. Punctureseal survives our hard winters and hasn't let us down" - Hugo Meynell
